

ITELYUM

SUSTAINABILITY POLICY

Quality and Responsibility

Itelyum works to ensure and continually improve the quality of products, processes and services. To this end, it adopts a systematic approach aimed at meeting increasingly challenging quality requirements, creating value along the life cycle of products and improving relations with customers and suppliers.

In addition, by combining sustainable vision with the growing demands of the market, the group aims to understand, control and communicate technical and environmental performance and health and safety effects of products, throughout the life cycle, from production to final disposal or re-use.

Furthermore, as much as feasible within its sphere of influence, it promotes the most sustainable applications of its products and services.

All activities are aligned with the group's core values, defined procedures, market needs and sector standards.

The "Quality and Responsibility" Policy is part of Itelyum Sustainability Policies and is a founding element of its strategies, procedures and daily operations.

It applies to all group activities, business partnerships, mergers and acquisitions, and in all activities involving its stakeholders.

In order to ensure its effectiveness, this policy is subject to periodic review and update.
